

S-Shaped Behavior

Generic Structure/Pattern	General
<p>The diagram illustrates the causal structure of S-shaped behavior. It starts with 'total individuals' (stock) leading to 'fraction who don't have it' (stock). This fraction leads to 'Individuals who don't have it' (stock), which then leads to 'likelihood of getting it' (stock). This likelihood leads to 'transfer per round' (flow), which leads to 'Individuals who have it' (stock). 'Individuals who have it' leads to 'contacts by 'have it' people' (stock), which leads to 'contact rate' (flow), which leads to 'contacts between groups' (flow), which then leads back to 'fraction who don't have it'. There are also feedback loops from 'Individuals who have it' back to 'fraction who don't have it' and 'likelihood of getting it'.</p>	<p>Connections to Life: Rumors, Infections</p> <p>Lesson Title</p> <p>Grade Level</p> <p>Subject</p> <p>Related Standards/Objectives</p>
